

FACE THE FACTS

Louis DeJoseph, MD is one of the select few surgeons in Atlanta with special training in facial plastic and reconstructive surgery. His patients have voted Dr. DeJoseph or "Dr. D", the **Best Facial Plastic Surgeon in Atlanta by Jezebel Magazine** again for 2019!

His practice, Premier Image Cosmetic and Laser Surgery, was Georgia's first cosmetic surgery center to specialize in complete specialty aesthetic plastic surgery for both face and body procedures. Today he's revealing the answers to his patients most frequently asked questions.

How can I improve my skin in my 30's? This is easy and simple – Drink plenty of water, use sunscreen daily, moisturize and get a good night's sleep. There are some treatments to consider if you haven't had better success with being proactive. There are various solutions available to help hydrate and rejuvenate your skin, from cleansing to more advanced in-office treatments that can all be done over a lunch break.

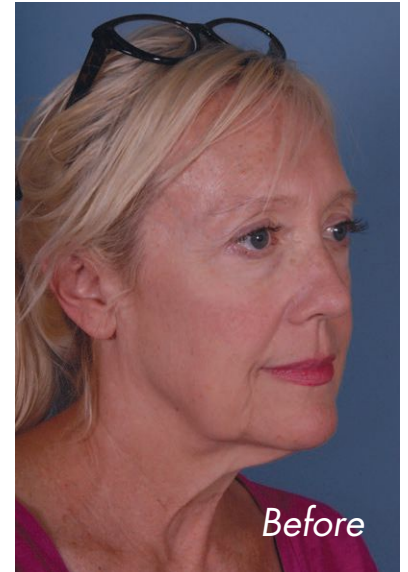

At what age should I start using anti-aging products? The earlier the better, however remember it is not just about anti-aging products. There must be a focus on a healthy lifestyle with an easy maintenance plan to keep your skin youthful and vibrant. It is vital to establish a personal skincare routine each day and see a skincare professional once a month. Simple regimens such as vitamin C scrubs, microdermabrasion treatments or hydrating facials can really keep age away. The use of neurotoxins such as Botox, Dysport or Xeomin will also help stall the appearance of fine lines and wrinkles.

How do I choose a cosmetic injector? An injection appointment should never be made based on price. I have seen my fair share of patients who have sought out discount filler and neurotoxins seeking my assistance because they were unhappy with their results. Your face is the first thing people see when they meet you. Your eyes and lips are the most influential contribution to your facial expressions, so you must seek out someone who understands how to execute your best you! Make sure to ask your injector if they are licensed, board certified, trained, how long have they been injecting and how many treatments they perform each year. Look at before and after photos, ensure they are to your liking, and remember less is more.

What's the best skin care treatment to prepare for a big event? Hydration, hydration, hydration! The best skin appears hydrated and full. I always recommend a hydrating facial. In fact, I recently introduced the HydraFacial® into our practice and the results are simply amazing. In just 30 minutes we can clean, extract dirt and oil from pores, and hydrate your skin. We can also add boosters to your treatment to improve fine lines, give you a fuller lip and provide you with a softer refreshed appearance around your eyes.

PLASTIC SURGERY What's Trending
